DETAILED ACTION

This Office Action is in response to the Terminal Disclaimer and Amendment filed on October 23, 2007.

Election/Restrictions

Newly submitted claims 23-35 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: claims 32-35 contain subject matter pertaining to a collector-less bipolar junction transistor or a method of operating a circuit. This subject matter is different from the original claims which pertain to a bipolar transistor having a collector.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 32-35 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Art Unit: 2815

Authorization for this examiner's amendment was given in a telephone interview with Leslie S. Szivos on January 4, 2007.

The application has been amended as follows:

This application is in condition for allowance except for the presence of claims 32-35 directed to the invention non-elected without traverse. Accordingly, claims 32-35 been cancelled.

Allowable Subject Matter

Claims 1-14 are allowed.

The following is an examiner's statement of reasons for allowance: the Terminal Disclaimer filed on October 23, 2007 is sufficient to overcome the 35 USC 101 Double Patenting Rejection. US Patent 7,115,965 B2 is removed as a primary reference.

Therefore, the remaining prior art does not show, alone or in combination, a bipolar transistor comprising: a conductive back electrode for receiving a bias voltage; an extrinsic collector which includes a second conductivity type dopant, said extrinsic collector borders a base, and said base is electrically isolated from said conductive back electrode; and an emitter comprising a second semiconductor layer of the second conductivity type dopant located over a portion of a base, wherein said conductive back electrode is biased to form an inversion charge layer at a bottom portion of said base

Art Unit: 2815

region at an interface between said first semiconductor layer and said insulating layer and said inversion charge layer serves as an intrinsic collector of said transistor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
